

# iScreen

iScreen Oral Fluid Drug Screen Test is a one-step chromatographic immunoassay device for the qualitative simultaneous detection of Amphetamine, Opiates, THC, Methamphetamine and Cocaine in oral fluid.

iScreen was developed to provide the following advantages over urine based drug screens:

- Simple, rapid, non-invasive, on-site, one step procedure
- Total collection and testing time in less than 15 minutes
- Simultaneous testing for 6 drugs
- Eliminates uncomfortable gender observation requirements
- Simple visual results

Use of iScreen is very simple. One places the sponge end of the collection wand in the mouth for approximately 3 minutes. Once the sponge is saturated with saliva, simply lock the wand into the testing device

Each iScreen is pouched individually and has a 12-month shelf life.

For more information on the iScreen contact:
